WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two from 10 mm plate, about 230 x 272, cut to the outline.
Sizes along from the bottom left corner of the outline (the corner over the skid ends) and up from the bottom edge, which stands on the end cross tube. The outline bulges 21 left of that corner.
Shaft hole 40.5 at 32 along, 206 up (266 above the ground).
Pawl shaft hole 16.5 (+Y plate) at 166 along, 119 up.
Catch shaft hole 16.5 (-Y plate) at 191 along, 215 up.
Crank pin access hole 31 (+Y plate) at 108 along, 131 up.
Ream the shaft holes in both plates clamped together, after welding, with a 40 mm bar through both to keep them in line.
Rest stop bar 30 mm at 54 along, 128 up, welded across.
Fit: inner faces 120 apart; the hub (100 long) sits between them on two 10 mm washers. Ties weld to the outer faces.
Check: a 40 mm bar slides through both shaft holes.
