WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Plate 20 mm, 360 x 230.
Ribs: two 20 mm plates, 488 long, cut to the outline in the front view: 70 high over the plate, with ears past both ends.
Hinge ear (+X): 31 hole 30 beyond the plate end, level with the plate's mid-thickness.
Latch ear (-X): 31 hole 30 beyond the plate end, 25 below the plate's underside.
Drill or bore both ribs clamped together so the holes line up.
Weld the ribs on the plate, 100 apart inside (centres 120), fillet both sides, full length.
Fit: the ears sit inside the mold's lugs with 2 mm each side.
The plate's underside sits flat on the mold rim.
Check: with the lid on the mold, both pins push through by hand.
