WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make four, all the same. Bar 70 x 28, 315 long.
Centres 245 apart on the bar's centre line, 35 from each end.
Round both ends to a 35 radius about the centres.
Bore 46 at both centres for the pressed-in bushes (40 bore),
bores parallel within 0.2 mm over the 28 mm thickness.
Drill all four links clamped together, or on a jig, so the
centres match within 0.2 mm.
Press in the bushes with a vice or press; ream to fit the
40 pins with a light running fit; add a grease nipple at
one end of each link (6 mm hole into the bore).
Fit: two lower links outside (64 to 92 from the centre line),
two upper links inside (32 to 60), with spacers between.
A 2 mm felt or rubber dust seal washer (56 outside, 40.5 bore)
goes on the pin against each outer link face, round the bush.
Check: all four links stacked, a 40 pin passes through both ends.
