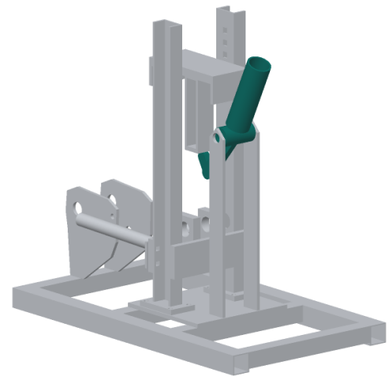
RIGHT VIEW

Scale 1:5; looking at the right side (along -X)



WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Hub: 60 round, 110 long, bored 31 for the 30 mm pivot pin.
Arm: 20 mm plate, cut to the outline in the front view: from the hub, 40 wide, down to an elbow 179 away, then 30 wide up to a round nose of 15 radius. Nose top 160 from the pivot centre, 80 below it and 139 toward the press. Weld on the hub centre.
Socket: 72 x 5 tube, 228 long, on the hub on the far side, 30 degrees above the line from the pivot to the nose.
Fit: hub between the eject posts on the pin, circlips each end; the nose sits under the push rod's foot.
Smooth the nose; it slides on the rod foot as it lifts 160.
Check: swings freely; with the lever in the socket, a pull lifts the nose 160 without touching the column or the mold.
