WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make one pawl (+Y side) and one catch (-Y side), mirror images.
Shaft: 16 bright bar, 40 long.
Pawl plate: 12 mm, 24 wide, 90 between the shaft and the tip centre, round ends of 12 radius; weld on the shaft's inner end.
Handle: 10 mm plate 20 wide, from the shaft out to a 20 knob, welded on the shaft's outer end, outside the bracket plate.
Fit: shaft through the 16.5 hole in the bracket plate, washer and circlip; a torsion spring holds the tip against the crank pin.
Pawl: its tip drops in under the crank pin at the end of the stroke and takes the kickback end on, along its length.
Catch: its tip drops in above the crank pin at the start and stops the lever falling into the stroke.
Check: each snaps in by its spring and lifts out by the handle.
