WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Frame: timber 45 x 45, 900 x 700 outside, corners halved, glued and screwed.
Mesh: 5 mm welded wire mesh 810 x 610, stapled to the frame's top face and covered with a 20 x 10 batten screwed down.
Prop: two 24 mm hardwood legs 700 long, hinged to the frame's top rail, so the sieve leans back at about 65 degrees.
Use: throw dry soil at the mesh; what passes is used, what stays (stones, clods) is set aside.
