DOCUMENT CONTROL

Document ID	EPR-REG-001	Version	0.1
Status	Draft	Date	2026-10-25
Author	Amish Chadha	License	CERN-OHL-S-2.0
Project TRL	TRL 3 Proof of concept		
Repository	github.com/BoujeeEnjinia1701/earthpress		
Source	docs/07-regulatory.md @ 212cbb1		

REVISION HISTORY

Version	Date	Author	Change
0.1	2026-10-25	Amish Chadha	First regulatory and standards register (kit 1.8 pipeline); sources checked 2026-10-25

EarthPress regulatory and standards register

Which standards and regulations apply, where, and what is needed. Not legal advice; anything marked "to assess" needs a qualified reviewer before any product claim. Two families matter: the rules for the **blocks** (earthen building codes and block standards, which set strength and testing and differ by country) and the rules for the **press** as hand-operated machinery (guarding, ergonomics and, if it is ever sold in a regulated market, machinery law). EarthPress makes no claim that its blocks comply with any code; structural use needs local block tests and an engineer (PRC safety notes). Method: STANDARDS section 23.

Table 1. Regulatory and standards register.

#	Standard or regulation	Jurisdiction	What it covers	Applicability to this design	Owner (role)	Status
G1	14.7.4 NMAC, New Mexico Earthen Building Materials Code (2021)	New Mexico, United States	Adobe, rammed earth and compressed earth blocks: 300 psi (about 2.1 MPa) compressive strength, 50 psi modulus of rupture, five random units tested per project	Strength reference for PR-003; applies to blocks used in New Mexico, not to the press	Co-design partner and project engineer	Applies to blocks where used; tests at TRL 4
G2	IS 1725:2023, Stabilized soil blocks used in general building construction, specification (replaces IS 1725:2013)	India	Requirements and tests for stabilized soil blocks	The first candidate partner is in India (EPR-DEC-001, 2026-10-02); strength classes and tests for PR-003	Co-design partner	To assess (standard not yet read)
G3	ARSO WD-ARS 1333:2018, Compressed stabilized earth blocks: requirements, production and construction	African Organisation for Standardisation member states	Block requirements, production and construction	Reference for programs in sub-Saharan Africa; status of adoption per country to check	Co-design partner	To assess (working draft; adoption to check)
G4	ASTM E2392/ E2392M-24, Standard guide for design of earthen wall building systems	International (ASTM)	Design guidance for earthen walls, including compressed earth blocks	Guidance for structural use of the blocks, not the press	Project engineer	To assess
G5	DRS 514-1:2022, Compressed earth blocks, part 1: definitions, classification and specifications (draft Rwanda standard; parts 2 to 4 also published as drafts)	Rwanda	CEB types, requirements, test methods and conformity criteria; excludes earthquake, flood and cyclone-prone areas	Example of a national CEB standard in East Africa	Co-design partner	To assess
G6	ISO 12100, Safety of machinery: general principles for design, risk assessment and risk reduction	International	Hazard identification and risk reduction method	Method used for the hazard analysis in EPR-RSK-001	Design lead	Applies as method; met by design at TRL 3 (RSK)

#	Standard or regulation	Jurisdiction	What it covers	Applicability to this design	Owner (role)	Status
G7	ISO 13857, Safety of machinery: safety distances to prevent hazard zones being reached by upper and lower limbs	International	Guard opening sizes and reach distances	Linkage guard openings (12 mm or less, BLD-001) and the 100 mm pinch clearance in PR-012	Design lead	To assess (openings to check against the standard's tables)
G8	Regulation (EU) 2023/1230 on machinery	European Union	Essential health and safety requirements and conformity assessment for machinery placed on the EU market	Only if a press is placed on the EU market; an open design built by its user is outside the plan at TRL 3	Amish (decision)	To assess, only if sold in the EU
G9	ISO 11228-1 and ISO 11228-2, Ergonomics: manual handling (lifting and carrying; pushing and pulling)	International	Recommended limits for lifting (reference mass 25 kg) and for push and pull forces	Lifting the press pieces (44.5 kg by two) and the lever force (PR-005); STM S5, S21	Design lead	Lifting met on paper (S21); pull force to assess against ISO 11228-2
G10	29 CFR 1926.1153, Respirable crystalline silica in construction (OSHA)	United States	Permissible exposure limit 50 ug/m3 over 8 h and control measures	Sieving dry soil; damp sieving and FFP2 or N95 respirators specified (PRC, BLD); other countries have their own limits	Site lead	Applies where used in the United States; controls stated; no exposure claim
G11	National cement handling and PPE rules; cement safety data sheets	Every jurisdiction	Skin and eye hazards of wet cement	Gloves and eye protection specified (PRC, BLD)	Site lead	Applies; controls stated
G12	CERN-OHL-S-2.0 and MIT licenses; REUSE	International	Open hardware and software licensing	The repo's licenses (`REUSE.toml`)	Amish	Met by design

Status: to assess, applies, does not apply, met by design, certification needed later.
